IOANNIS TSIOUKIS

AI Department Manager | AI Engineering Lead

Technical Delivery | Applied AI & LLM Systems | Solution Architecture

iantsiouk@proton.me | Interested in remote opportunities

LinkedIn | GitHub | Portfolio

PROFESSIONAL PROFILE

AI Department Manager and hands-on AI Engineering Lead delivering enterprise AI applications from business discovery through production adoption. Own technical roadmaps, prioritization, solution architecture, engineering standards, and delivery coordination. Connect business stakeholders, technical contributors, and external partners while remaining hands-on in Python, FastAPI, LLM applications, RAG, intelligent document processing, and enterprise integration.

CORE COMPETENCIES

Technical leadership & delivery: Roadmaps, project and portfolio management, requirements and feasibility, stakeholder and vendor coordination, risk management, engineering governance.

Applied AI engineering: Python, FastAPI, LLM applications, RAG, agent workflows and tool integration, structured outputs, human-in-the-loop validation, ML integration, LangChain.

Architecture & production readiness: API and service design, SQL Server, ERP and legacy integration, access controls, testing and Pytest, Docker, CI/CD fundamentals, OpenTelemetry, metrics, logs, and traces.

PROFESSIONAL EXPERIENCE

AI Department Manager | AI Engineering Lead

Food manufacturing industry | Feb 2026 - Present

- Lead the AI and application-development function, defining technical direction, engineering standards, project priorities, and delivery roadmaps.
- Own initiatives from business discovery and feasibility through solution design, implementation, deployment, and operational adoption.
- Translate business requirements into technical scope, architecture decisions, work packages, dependencies, milestones, and acceptance criteria.
- Coordinate stakeholders, technical contributors, and external partners while managing risks and delivery dependencies.
- Establish production-readiness standards across integration, security, testing, deployment, observability, and maintainability.

SELECTED DELIVERY

- Invoice processing: OCR and LLM structured extraction, human validation, duplicate prevention, audit controls, and controlled ERP-format export.
- HR knowledge assistant: on-premises Qwen LLM, RAG-based retrieval, personalized employee guidance, and Jira escalation for unresolved requests.
- Shared application foundations: reusable templates and standards for authentication, enterprise integration, deployment, and observability.

IOANNIS TSIOUKIS

Professional experience, education & credentials

PREVIOUS EXPERIENCE

AI/ML Full-Stack Engineering Lead

Food manufacturing industry | Nov 2024 - Jan 2026

- Identified and prioritized AI and automation opportunities through workflow analysis, stakeholder discovery, and feasibility assessment.
- Designed and delivered LLM applications, AI assistants, intelligent extraction systems, ML-enabled services, APIs, and internal automation.
- Led end-to-end delivery from requirements and architecture through implementation, integration, deployment, monitoring, and adoption.
- Integrated applications with ERP systems, SQL databases, operational workflows, enterprise APIs, and legacy business systems.
- Established testing, validation, logging, monitoring, documentation, and reusable application patterns.

R&D Scientist | Process & Data Innovation

Food manufacturing industry | 2018 - 2024

- Led industrial R&D and process-improvement initiatives using experimentation, root-cause analysis, data analysis, and structured problem-solving.
- Delivered recurring production projects involving cross-functional coordination, operational planning, training, and continuous optimization.
- Recruited, trained, and coordinated 20+ multidisciplinary seasonal staff across recurring production campaigns.

EDUCATION

MSc Data Science and Machine Learning
Hellenic Open University | 2023 - 2026 | Completed July 13, 2026

BSc Chemistry
Aristotle University of Thessaloniki | 2009 - 2017

CERTIFICATIONS

- Microsoft Azure AI-900 - Azure AI Fundamentals
- Certified Python Application Developer - Vellum

SELECTED PROFESSIONAL DEVELOPMENT

Completed training: Pytest - TDD & BDD; OpenTelemetry & Modern Observability; Docker & Kubernetes foundations; advanced LLM / generative AI engineering; software security and secure development; project management and business operations.

Kubernetes: foundational knowledge / course exposure. Coursework is distinct from professional certification. Current Azure AI-200 and AI-103 training and future AI-500 preparation are not earned credentials.

LANGUAGES

Greek - Native | English - Professional proficiency
